

**Early testing can prevent heart disease, especially for women.  
The HunterHeart panel gives you that protection.**

*“If caught early enough heart disease can be prevented  
in just about all patients.”*

—Paul Ziajka, MD, PhD.

*Florida Lipid Institute, author of 5 textbooks on lipid management.*

Today, new tests and drugs are available to identify and successfully treat specific causes for both heart attack and stroke. The forty-year-old lipid panel utilized by the majority of physicians to assess the risk of heart disease is accurate in predicting risk only 40% of the time, and has no ability to identify risk of stroke.

**The HunterHeart® Program**—the most advanced technology to assess the risk of heart disease and stroke *is now available* with a simple blood test.

### **HunterHeart Provides These Tests For Your Optimal Health:**

- HunterHeart Panel—using the most advanced technology this test assesses your risk of heart disease, stroke, atherosclerosis, genetic risk factors and Vitamin D deficiency. A simple blood test is all you need.
- OncoTect—detects the HPV gene products that can cause cervical cancer. The same PAP smear sample can be used.

The HunterHeart Program provides a therapy guide based on **your personal risks** to assist physicians with the full scope of therapies to treat the specific causes of your risks. The genetic testing helps assess your risk and to optimize treatment by predicting your response to specific drugs, types of diet and exercise.

### **It's easy to get started—**

visit [www.HunterHeart.com](http://www.HunterHeart.com) click on HunterHeart, download our questionnaire, and letter, then take these to your physician to request the HunterHeart Panel.

Or, call HunterHeart at 760-452-6265
